Profile

Senior Full-Stack Engineer with **6+ years of commercial experience** engineering high-throughput web applications, distributed systems, and payment infrastructure. Specialized in modern TypeScript ecosystems (React, Next.js, Node.js/NestJS, Python), database optimization, and high-conversion frontend architecture. Proven track record in designing resilient fintech integrations (Stripe, TON, Revolut), reducing infrastructure overhead, and driving core Web Vitals performance.

- **Frontend:** React, Next.js, TypeScript, Vite, Redux Toolkit, Zustand, Tailwind, SCSS.
- **Backend:** Python, FastAPI, Node.js, Fastify, Express, WebSockets, NestJS, GraphQL, RESTful APIs, PrismaORM, TypeORM.
- **Queues & Databases:** Kafka, SQLite, PostgreSQL, MongoDB, Redis.
- **Infra/Tools:** Docker, CI/CD, AWS (S3, EC2), Hostinger, VPS, Git, Nginx, AIs (Claude, Agents, Harness).
- **Payments & Web3:** Stripe, TonPay, TON, Stellar.

Professional Experience

Q-code (Fintech & Web3 Studio) 11/2024 – Present

Project: XoMobile — A service for purchasing and activating eSIM packages in 150+ countries directly within Telegram without installing third-party apps.
Role: Full-stack Engineer.
Tech Stack: React, Vite, TypeScript, Fastify, Prisma, PostgreSQL, TON Connect, Stripe.
Key Responsibilities:

- Collaborated in a cross-functional agile team (frontend, QA, tech lead, PM) driving rapid sprint releases and architecture reviews.
- Developed an order page where you could see all the information about the order and download a generated PDF invoice file
- Deployed to VPS via GitHub CI/CD, used different workflows for static analysis with SonarQube, and checked for errors in the code
- Refactored legacy codebase, resolving technical debt and standardizing architectural patterns across core services.
- Maintained accurate OpenAPI/Swagger documentation synchronized with the live codebase

Achievements:

- Reduced backend response times and cleaned up legacy Prisma schema, removing deprecated fields and consolidating data models
- Developed and implemented various payment systems: TonAPI, Raw wallet address payment, Stripe, Revolut
- Covered the project with tests to over 80%, which allowed the implementation of SonarQube as a technical analysis of pull requests

Webpartner 11/2022 – 10/2024

Project: Severon — A high-efficiency heat pump solutions platform (E-commerce/Industrial).
Role: Full-stack Engineer.
Tech Stack: Next.js (SSR/SSG), TypeScript, Tailwind CSS, Cloudflare.

Key Responsibilities:

- Developed a high-performance frontend using Next.js, achieving fast load times through Static Site Generation (SSG).
- Integrated complex UI components for product catalogs and inquiry forms.
- Configured deployment pipelines and managed static assets via Cloudflare.
- Built responsive, accessible UI components for industrial product listings and specification tables using Tailwind CSS.

Achievements:

- Improved **LCP** by **~50% (1.5s > 0.7s)**, resulting in better SEO indexing and higher conversion on product pages

Project: Skillspring — Website for finding tutors in Latvia 09/2021 – 10/2022
Role: Full-stack engineer
Tech stack: React, TypeScript, Next, Nest, TypeORM, PostgreSQL
Key Responsibilities:

- Implemented an admin panel where owner could easily change user data, change lesson cards on the main page, and much more
- Formatted images in webp to compress space
- Architected and developed a full-featured administrative portal allowing platform administrators to manage tutor profiles, moderate course listings, and inspect user activity.

Achievements:

- Developed a table that made it easy to sign up for a lesson with a teacher, switch between weeks, and directly create lessons
- Reduced static asset payloads by **~55%** via automated WebP compression, leading to noticeably faster page transitions across slower mobile connections.

Project: MTL Stellar Multisig — A service where you can view account details using an address and create various transactions 07/2020 – 08/2021
Role: Full-stack engineer
Tech stack: React, TypeScript, Next, Firebase, Stellar SDK
Key Responsibilities:

- Developed a system for creating, modifying, storing, and signing transactions from scratch
- Implemented FSD Architecture
- Developed a page where you can view all the information about wallet account

Achievements:

- Engineered a multi-signature transaction management flow from scratch, enabling secure payload creation, multi-party threshold verification, and cryptographic signing via Stellar SDK.
